DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

2. The abstract of the disclosure is objected to because it should not contain reference numerals. Correction is required. See MPEP § 608.01(b).
3. The disclosure is objected to because of the following informalities: The claims should not use reference numeral "3" in reference to the "measurement space".

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Laukien et al. P.N. 5,168,211 (Laukien).

Laukien discloses as magnet system. Applicant's attention is directed to Fig. 2a and 2b and their corresponding description. The magnet features electrical conductors 1a, 1b,

2a and 2b, wound in such a manner that two access ports are provided for the magnet system. See openings 12 and 15. Note that the openings or access ports have differing sizes such that two differing diameter cylinders would be defined, the first one having a diameter of 100 cm and the second one having a diameter of 60cm. See e.g. lines 22-39 of col. 6. Laukien meets all the limitations of the claims at issue in their present form.

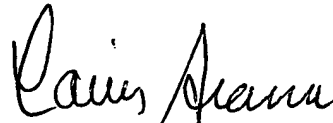

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Aihara et al. and Roth et al. disclose magnet systems having multiple access ports. Note the abstracts and figure drawings of each of the documents.
